Professional Summary

Senior Software Engineer and AI Specialist with 10+ years of experience designing and deploying large-scale agentic, generative AI, and automation systems across the finance, telecom, and utilities sectors. Deep expertise in the Microsoft AI stack, multi-agent architectures, and RAG pipelines. Proven record of delivering measurable impact: \$400K annual savings from chatbot platform migration, \$200K saved through an AI meeting summary product and a custom Hugging Face lead-classification model that outperformed Salesforce Einstein by 28%. Dedicated to bridging research and production-grade engineering to drive enterprise-wide AI adoption.

Core Competencies

Agentic AI & LLMs: Multi-Agent Systems using Microsoft Copilot Studio, LangGraph, Prompt Engineering, Chain-of-Thought Reasoning, Tool-Use & Function Calling, Autonomous Workflow Design

Generative AI: Azure OpenAI, RAG Pipeline Design, MCP Servers, Semantic Search, Vector Databases (Weaviate and ChromaDB), Context Window Management

ML & Deep Learning: PyTorch, Hugging Face Transformers, NLP Toolkits (spaCy, NLTK)

MLOps & AI Backend: Airflow, FastAPI, Databricks, Azure Function Apps, GitHub Actions / Pipelines, Heroku, REST & Webhook Integration

Data & Cloud: Microsoft Power Platform, AWS S3, Power BI, Power Automate and Dataverse

Automation (RPA): Blue Prism (AD01), UiPath (Certified Associate), Automation Anywhere (Advanced)

Professional Experience

FactSet

Remote, UK

Senior Software Engineer — AI & Agentic Systems

Jun 2022 – Present

- Designed and deployed **multi-agent agentic systems** using **Copilot Studio** and **MCP servers**, enabling autonomous cross-system orchestration across multiple business units.
- Integrated **Azure OpenAI with RAG** into the enterprise chatbot; selected and deployed the best-performing **Hugging Face embedding model** to a production Vector DB, improving semantic retrieval accuracy.
- Engineered a custom **lead-classification model** (Hugging Face) trained on 2 years of Salesforce CRM data, achieving **88% accuracy**, outperforming **Salesforce Einstein by 28%**, and boosting sales team productivity by **45%**.
- Designed and shipped an **AI Meeting Summariser** using LLM-generated structured notes from MS Teams transcripts, saving **\$200,000/year** by replacing a potential Teams Premium subscription.
- Orchestrated **Airflow** workflows to extract raw data from Graph API and send summaries to **10,000+** users asynchronously.
- Architected and led the migration of the enterprise chatbot from AiSERA to **Microsoft Copilot Studio**, delivering a **92% resolution rate** and **\$400,000 in annual savings** via guided agentic workflows.
- Enhanced sales consultants' productivity by delivering a **Client Meeting Preparation document** that consolidates information from multiple data sources, including Salesforce, internal ticketing systems, email context, and more.
- Designed **autonomous agents** in Copilot Studio that can perform actions on systems, triggered by events originating from AWS Queue, Graph Subscriptions etc.
- Built on-premises **FastAPI** inference services enabling the AI agent to take real-time actions on behalf of support teams; consumed third-party vendor APIs for automated software licence provisioning.
- Defined AI requirements across business units and produced technical design documents; reported model and chatbot performance metrics via **Power BI** dashboards.

Loughborough University

Loughborough, UK

Business Intelligence Consultant

Dec 2021 – May 2022

- Evaluated university innovation activities and research performance; created and presented **5+ Power BI dashboards** illustrating year-on-year trends to senior leadership.
- Gathered data via data pipelines from publicly available government sources in Leicestershire and consolidated university datasets for the Council.

| Accenture (Client: Wisconsin Energy Corporation)
<i>Senior RPA Developer</i> | India
<i>Jan 2020 – Oct 2021</i> |
| <ul style="list-style-type: none">○ Designed and deployed 15+ automation bots (Blue Prism, UiPath) across SAP, Web, Desktop, and Citrix, delivering £90,000 in annual cost savings; managed end-to-end RPA lifecycle from PDD/SDD through UAT to production.○ Received the Pinnacle Award for outstanding client requirement analysis and efficient workflow delivery. | |
| Tata Consultancy Services (Client: Ericsson)
<i>RPA Developer</i> | China
<i>Jun 2016 – Jan 2020</i> |
| <ul style="list-style-type: none">○ Identified manual business processes that take six hours to complete by Chinese onsite engineers and automated the China Mobile License transfer process using BluePrism. Travelled onsite to the Nanjing Ericsson factory and co-ordinated with clients to successfully deliver the project.○ Scoped and delivered over 25 automation processes optimising bot execution to reduce the average handling time from 15 minutes to five seconds. | |

Key Projects

Sales Prospect Classifier: Fine-tuned a Hugging Face transformer model on 2 years of labelled CRM leads to classify prospects into *Sales Classified*, *Sales Rejected*, and *Marketing Rejected*. Integrated directly with Salesforce via API; benchmarked against Salesforce Einstein and achieved a **28% accuracy improvement**, lifting sales team productivity by 45%.

AI Meeting Summariser: Built a pipeline to retrieve MS Teams transcripts, generate structured meeting notes with Azure OpenAI, and push summaries to internal knowledge systems. Eliminated the need for a Microsoft Teams Premium subscription, saving **\$200K/year**.

Chatbot Platform Migration: Led end-to-end migration from AiSERA to Microsoft Copilot Studio with multi-agent agentic workflows powered by MCP servers, achieving a **92% resolution rate** and **\$400K annual savings**.

Enterprise AI Projects: Robin Desk Management to manage desk capacity, Cloud Spend Optimization to reduce cloud costs, HR workflow automation with Workday RaaS integrations
